ITER

Job Application for Control Application Developer

Dear:

I am a final year Doctoral student of University of Science and Technology of China(USTC) and have been performing studies on control systems of accelerator supervised by Professor Gongfa Liu at the National Synchrotron Radiation Laboratory (NSRL), and I am writing in response to your advertisement for recruiting a *Control Application Developer*. I hope I can get the job.

ITER is one of the most advanced laboratories in the world. The main reason for my confidence in this position lies in both my extensive training in software programming and my experience in the control system of large-scale scientific facility. Please find more details in my enclosed resume.

I'm looking forward to having a chance to work at ITER after graduation in the summer of 2019. Thanks.

Thank you for your time and patience, and I would greatly appreciate it if you could grant me an interview.

Sincerely,

Yifan Song
